

E-Commerce Sales & Business Performance

Executive Summary — Data Analytics & Business Intelligence Task 1

1. Project Overview

This project develops an Excel-based business intelligence dashboard using cleaned e-commerce sales data. The analysis focuses on revenue, profit, monthly sales trends, product categories, regional performance, customer characteristics, payment methods, and returns. The workbook uses Excel tables, Pivot Tables, Pivot Charts, KPI cards, and interactive filters to support business reporting and decision-making.

2. Dataset & Preparation

The analysis uses the **Cleaned_Data** worksheet from the supplied workbook and contains **34,500** records/orders. Key fields include order, customer, product, category, price, discount, quantity, payment method, order date, delivery time, region, returned status, total amount, shipping cost, profit margin, customer age and gender. The workbook also includes calculated fields for profit, year-month analysis, and order value classification.

3. Key Performance Indicators

KPI	Result
Total Revenue	■5,865,293.05
Total Profit	■5,653,044.92
Total Orders	34,500
Average Order Value	■170.01

4. Key Business Insights

- **Regional performance:** South generated the highest sales (■1,298,096.07).
- **Category performance:** Electronics was the highest-sales category (■3,319,206.50).
- **Profitability:** Electronics generated the highest calculated profit (■3,265,273.43).
- **Monthly trend:** 2024-12 recorded the highest monthly sales (■278,154.19).
- **Payment method:** Credit Card had the highest sales contribution (■2,056,787.40).
- **Returns:** 1,903 orders were marked as returned, approximately 5.52% of all records/orders.

5. Supporting Analysis

Regional Sales

Dimension	Sales
South	■1,298,096.07
North	■1,264,008.35
West	■1,186,350.50
East	■1,176,334.75
Central	■940,503.38

Sales by Category

Dimension	Sales
Electronics	■3,319,206.50
Home	■1,077,681.52
Sports	■629,825.54
Fashion	■471,545.80
Beauty	■153,019.38
Toys	■132,013.80
Grocery	■82,000.51

Profit by Category

Dimension	Calculated Profit
Electronics	■3,265,273.43
Home	■1,038,564.16
Sports	■601,399.96
Fashion	■435,320.58
Beauty	■133,356.83
Toys	■112,877.47
Grocery	■66,252.49

6. Dashboard Components

- KPI cards: Total Revenue, Total Profit, Total Orders, and Average Order Value.
- Monthly Sales Trend chart.
- Sales by Region chart.
- Sales by Category chart.

- Profit by Category chart.
- Interactive slicers/filters for Region, Category and other relevant dimensions.

7. Recommendations

- Prioritize analysis of the South region and identify practices that may be replicated in lower-performing regions.
- Review the Electronics category to maintain sales performance while monitoring profitability.
- Use monthly sales trends to support inventory, promotion, and operational planning.
- Monitor profit together with revenue so that high sales are not interpreted as high profitability automatically.
- Track returned orders and investigate categories or regions with comparatively high return levels.

8. Conclusion

The Excel dashboard converts cleaned e-commerce transaction data into a structured business reporting solution. Pivot Tables provide summarized analysis, while Pivot Charts, KPI cards, and interactive filters make the results easier to interpret. The dashboard supports monitoring of sales, profitability, regional performance, category performance, and customer-related patterns.

Note: Numerical findings in this summary are calculated from the supplied Excel workbook. This document is intended as the supporting Executive Summary for Task 1; the Excel workbook remains the primary project deliverable.
